Introduction to the European ATEX directive

Explosive atmospheres

Directive 94/9/EC defines an explosive atmosphere as a mixture of :

a) **flammable substances** – gases, vapours, mists or dusts
b) with **air**
c) under specific **atmospheric conditions**
d) in which, after ignition has occurred, combustion spreads to the entire flammable mixture

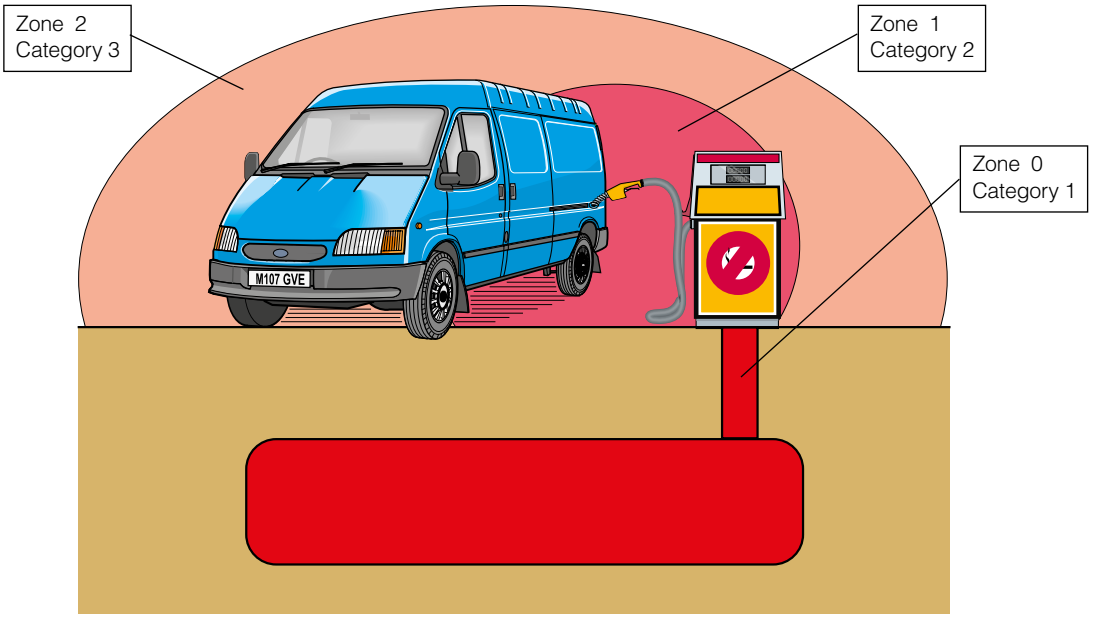
(NB: with regard to dust, it may be that not all dust is combusted after ignition has occurred)

An atmosphere with the potential to become an explosive atmosphere during operating conditions and/or under the influence of the surroundings is defined as a **potentially explosive atmosphere**. Products covered by directive 94/9/EC are defined as intended for use in potentially explosive atmospheres.

Harmonised European ATEX standard

The European Union has adopted two harmonised directives in the field of health and safety. The directives are known as ATEX 100a and ATEX 137.

Directive ATEX 100a (94/9/EC) lays down minimum safety requirements for products intended for use in potentially explosive atmospheres in European Union member states. Directive ATEX 137 (99/92/EC) defines minimum requirements for health and safety at the workplace, for working conditions and for the handling of products and materials in potentially explosive atmospheres. This directive also divides the workplace into **zones** and defines criteria by which products are **categorised** within these zones.
The table below describes the **zones** in an installation where there is a potential for explosive atmospheres. The **owner** of the installation must analyse and assess the area in which the explosive gas/dust mixture may occur, and if necessary must divide it into **zones**. This process of zoning then allows the correct plant and equipment to be selected for use in the area.



Zones Gas G	Zones Dust D	Presence of potentially explosive atmosphere	Type of risk
0	20	Present continuously or for long periods.	Permanent.
1	21	Likely to occur in normal operation occasionally.	Potential.
2	22	Not likely to occur in normal operation but, if it does occur, will persist for a short period only.	Minimal.

The ATEX directive has been in force throughout the European Union since 1 July 2003, replacing the existing divergent national and European legislation relating to explosive atmospheres.
Please note that for the first time, the directive covers mechanical, hydraulic and pneumatic equipment and not just electrical equipment as before.

With regard to the **Machinery directive** 98/37/EC, note that a number of external requirements in 94/9/EC refer to hazards arising from potentially explosive atmospheres, where the Machinery directive only contains general requirements relating to explosion safety (Annex I 1.5.7).

As a result, directive 94/9/EC (ATEX 100a) takes precedence over the Machinery directive with regard to explosion protection in potentially explosive atmospheres. The requirements in the Machinery directive are applicable to all other risks relating to machinery.

In most cases full certification is not required, a much more simple "Risk Assessment" as detailed in the Directive,for the products to be supplied will suffice. At the moment we are conducting "Risk Assessments" in accordance with the Directive, on a broad range of core products which will be published on the web site. A more limited range of products will have the full ATEX certification where this is deemed necessary.

Levels of protection for the various equipment categories

The various equipment categories must be capable of operating in accordance with the manufacturer's operating specifications at defined levels of protection.

Level of protection	Category Group I	Category Group II	Type of protection	Operating specifications
Very high	M1		Two independent means of protection or safety, ensuring that the equipment remains functional even in the event of two faults occurring independently of each other.	The equipment remains energised and functional even with an explosive atmosphere present.
Very high		1	Two independent means of protection or safety, ensuring that the equipment remains functional even in the event of two faults occurring independently of each other.	The equipment remains energised and functional in zones 0, 1, 2 (G) and/or zones 20, 21, 22 (D).
High	M2		Protection suitable for normal operation and severe operating conditions.	The equipment is de-energised in the event of an explosive atmosphere.
High		2	Protection suitable for normal operation and frequent faults, or equipment in which faults normally have to be taken into account.	The equipment remains energised and functional in zones 1, 2 (G) and/or zones 21, 22 (D).
Normal		3	Protection suitable for normal operation.	The equipment remains energised and functional in zones 2 (G) and/or zones 22 (D).

Definition of groups (EN 1127-1)

Group I Equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by flammable vapours and/or flammable dusts.

Group II Equipment intended for use in other places exposed to explosive atmospheres.

Group	I mines, combustible vapours		II other potentially explosive atmospheres (gases, dust)					
Category	**M1**	**M2**	**1**		**2**		**3**	
Atmosphere*			G	D	G	D	G	D
Zone			0	20	1	21	2	22

***** G = gas and D = dust

Temperature classes

Classification of flammable gases and vapours on the basis of ignition temperature.

Temperature class	Maxi. allowed temperature on the surface of the material (°C)
T1	450
T2	300
T3	200
T4	135
T5	100
T6	85

Parker components out of scope of the ATEX Directive :

Essential elements with the reliable use of the products and protection systems, but not having an autonomous function nor an own ignition source.

Note :

Sample instruction leaflets are illustrated in the ATEX catalogue PDE2584TC**
in French, English, German, Italian, Spanish and Swedish.
For other languages please consult your local Parker Sales Office.

Declaration of conformity

The product catalogues contain copies of the declaration of conformity demonstrating that the product meets the requirements of directive 94/9/EC.
The declaration is only valid in conjunction with the instructions contained in the installation manual relating to the safe use of the product throughout its service life.
The instructions relating to the conditions in the surrounding area are particularly important, as the certificate is invalidated if the instructions are found not to have been adhered to during operation of the product.
If there is any doubt as to the validity of the certificate of conformity, contact Parker Hannifin customer service.

Operation, installation and maintenance

The product installation manual contains instructions relating to the safe storage, handling, operation and servicing of the product.
The manual is available in different languages, and can be downloaded from **www.parker.com/euro_pneumatic**.
This document must be made accessible in a suitable place near where the product is installed. It is used as a reference for all personnel authorised to work with the product throughout its service life.
We, the manufacturer, reserve the right to modify, extend or improve the installation manual in the interests of the users.

For more information about ATEX see EUs homepage: **http://europa.eu.int/comm/enterprise/atex/**

* Max permitted torque to not damage the gearbox

Parker Hannifin Corporation
Pneumatic Division - Europe

The high torque motors of the P1V-S type are small in size but provide extremely high output. Our high torque motors are also less apt to stall. These drive solutions are Particularly suitable for use in industrial agitators and mixers as used in the paint industry, food industry or pharmaceutical industry.

- Power 0.28, 0.57 and 0.86 kW
- Designed for arduous applications
- No-lube intermittent operation as standard

II 2 GD c IIC T6 (80°C) X

Operating information

Working pressure	Max 6 bar in Ex area
Working temperature	-20° to +40°C in Ex area
Fluid	Compressed air with ISO 8573-1 Quality class 3.4.3 (no-lube operation) and 3.-.5 (lube operation)

Note : All technical data are based on a working pressure of 6 bar and with oil.
For oil-free performances are -10 to 15% lower.
Data tolerance accuracy -+10%

For details, see technical catalogue on web site : www.parker.com/euro_pneumatic

P1V-M is a series of air motors, with or without gear box. They are made of grey casted iron.
Its robustness makes it suitable for all industrial air motor applications.

The range contains five different sizes with power ratings of 200, 400, 600, 900 and 1200 Watts,

The motor and gearbox are built to be extremely strong, making the motors suitable for applications requiring considerable robustness. The gearbox is of the planetary type, permanently lubricated with grease. The flange mounting is cast as an integral part of the case, and give, together with the foot bracket, plenty of opportunity for simple and robust installation.

- Power 0,2 kW, 0,4 kW, 0,6 kW, 0,9 kW & 1.2 kW
- Patented method for simple change of vanes
- Free speeds from 32 up to 10000 rpm
- Torque from 0,38 Nm up to 120 Nm by max output power
- Standard equipped with flange mounting
- Foot mountings as accesories

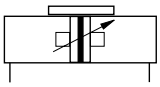
Components for EX-Areas

Information for ATEX-Directives

The rodless pneumatic cylinders of Parker Origa are the first linear drive unit, for that Ex range in the group of equipment II, Category 2 GD are certified.

Detail informations for use pneumatic components in Ex-Areas see leaflet PDE2584TCUK „EU Directive 94/9/EG (ATEX 95) for Pneumatic Components“.

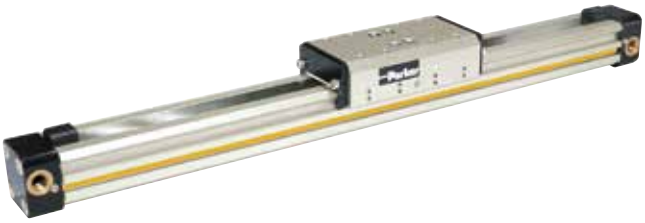


Rodless Cylinder Ø 10-80 mm

Basic Cylinder - Series: OSP-P ... ATEX

Basic Guide Ø 25-50 mm

Basic Guide - Series: BG ... ATEX



Plain Bearing Guide Ø 16-80 mm

SLIDELINE - Series: SL ... ATEX

Technical Data (deviant to the Standard Cylinder)

Characteristics	Description
General Features	
Ambient temperature range T_{min}	-10 °C
Ambient temperature range T_{max}	+60 °C
Max. switching frequency	1 Hz (double stroke/s) Basic cylinder 0.5 Hz (1stroke/s) Cylinder with guide
Operating pressure range p_{max}	Max. 8 bar
Max. speed v_{max}	3 m/s (Basic cylinder) 2 m/s (Cylinder with guide SLIDELINE and cylinder with guide BASIC GUIDE)
Medium	Filtered, unlubricated compressed air – free from water and dirt to ISO 8573-1 Solids: Class 7 particle size < 40 µm for Gas Water content: pressure dew point +3 °C, class 4, but at least 5 °C below minimum operating temperature
Noise level	70 dB (A)
Information for materials	
Aluminium	See data sheet ”Material“
Lubrication	See security data sheet ”Grease for use in Cylinder with guides“
Sealing bands	Corrosion resistant steel

Equipment Group II Categorie 2GD

Rodless cylinder: Ⓔx II 2GD c T4 T135°C -10°C≤Ta≤+60°C

SLIDELINE	Ø 16 to 80	1– 5500 mm	Mountings programme

Parker Hannifin Corporation
Pneumatic Division - Europe

This range of stainless steel cylinders has been specially designed for use in difficult environments. Hygienic design, external seals of flourianted rubber and prelubrication with our food-industry-approved grease according to USDA-H1 make the cylinders particularly suitable for food industry use.
All cylinders have magnetic pistons for proximity position sensing. Fixing dimensions to ISO 6431 simplify installation and make the cylinders physically interchangeable throughout the world.

- Round cylinder to ISO 6431
- All stainless steel
- Clean, smooth washdown design
- Magnetic piston as standard
- Adjustable cushioning for long service life
- Complete range of mountings and sensors

CE Ex II 2GD c T4 120 °C

Operating information

Working pressure:	Max 10 bar
Temperature range:	-20°C to +70°C
ATEX approval :	CE Ex II 2GD c T4 120 °C

Prelubricated, further lubrication is not normally necessary.
If additional lubrication is introduced it must be continued.

The innovative P1D is a future-proof generation of ISO/VDMA cylinders. The cylinders are double-acting, with a new design of air cushioning.
The P1D complies with the current ISO 6431, ISO 15552, VDMA 24562 and AFNOR installation dimension standards.

- Available in 32 to 125 mm bores
- PUR seals for long service life
- Drop-in sensors
- Corrosion resistant design
- Magnetic piston as standard
- Lubricated with food grade grease

The cylinders are supplied complete with a zinc plated steel piston rod nut.

Parker Hannifin Corporation
Pneumatic Division - Europe

P1D-T Large Bore Cylinders

The P1D-T range of tie rod cylinders is intended for use in a wide range of applications. Careful design and high quality manufacture throughout ensure long service life and optimum economy. Mounting dimensions fully in accordance with ISO 15552 (ISO 6431 and CETOP RP52P) greatly simplifies installation and world-wide interchangeability.

- Bore sizes Ø160 - Ø320mm
- Stroke lengths 10mm - 2000mm
- Magnetic piston as standard
- Adjustable cushioning as standard
- High temperature version
- Special version on request

The cylinders are supplied complete with a zinc plated steel piston rod nut.

Drop-in sensors

The completely new ”drop-in” P1D sensors can easily be installed from the side in the sensor groove, at any position along the piston stroke. The sensors are completely recessed and thus mechanically protected. Choose between electronic or reed sensors and several cable lengths and 8 mm and M12 connectors.
The same standard sensors are used for all P1D versions, i.e. even for P1D Clean with the patent applied system of integrated sensors. Please note that the sensors with 8 mm and M12 connector should have cable lengths 1 m for P1D Clean to allow flexible positioning of the sensors, including longer stroke lengths. There is a double jointed adapter for the tie-rod version, which offers simple and flexible use of standard sensors.

CE Ex II 3 G EEx nA II T4 X
II 3 D T135 °C IP67

Electronic sensors

The new electronic sensors are ”Solid State”, i.e. they have no moving parts at all. They are provided with short-circuit protection and transient protection as standard. The built-in electronics make the sensors suitable for applications with high on and off switching frequency, and where very long service life is required.

APB = All Ports Blocked

The above valve operation can be either :
- Pneumatic, with the addition of one or two pilot connectors complete with Ø4 mm Push-in connections : PVA-P111, PVA-P121, or PVA-P125.
- Electrical, with the addition of one or two solenoid actuators, only 6 W / 8,5 VA, P2FS ATEX certified type, (see page 19).

Mounting

The valves have integral mounting holes suitable for M4 screws and can be directly mounted onto any suitable surface.
The pipework connections will be either use of threaded fittings or direct Push-in depending on the body selected.

Parker Hannifin Corporation
Pneumatic Division - Europe

Compact 3/2 normally closed metal bodied valves with push-in air connections. Designed for the process duty cycle with high durability. Ideal for the process or packaging industry.

- High durability
- Very good repeat accuracy
- Design for process duty cycle
- Push-in connection
- Versatile and easily maintained
- Miniature size

Designed to fit the standard electrical Ø22mm knock out, they can provide dual pneumatic and electrical output signals. A variety of button and switch actuators are available.

- Facia mounted operation
- 3/2 NO or NC
- Modular construction
- Wide range of actuators
- Dual pneumatic an electrical output signal

Flow characteristics (according to ISO 6358)

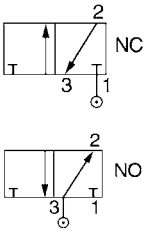
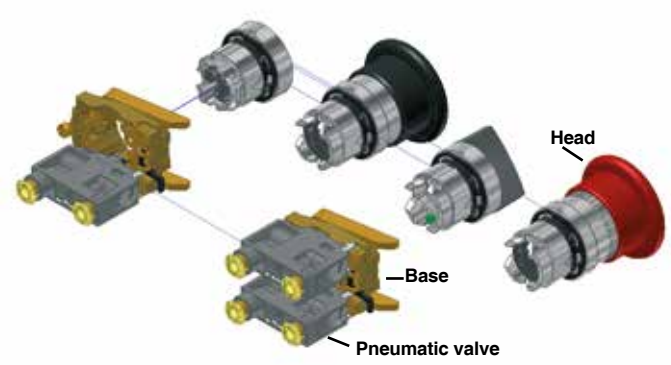
	Normally open NO	**ZBWE-161-EX**
	Normally closed NC	**ZBWE-162-EX**



All PXB-B4 valves can be connected either as normally closed 3/2 valve (NC) or normally open 3/2 valve (NO) as required, by connecting the primary air supply to port 1 or port 3.

Mixed products



Heads cannot be ordered separately. They are integrated into the basic pneumatic push button valve.

Mixed electro-pneumatic products can be built with a combination of a complete basic pneumatic push button valve and an additional electrical contact.

Eg : PXB -B3111BC2-EX + PXB-B4931-EX + ZBWE-161-EX

ATEX logic processing

Miniature high-speed valves in stand alone, stackable or combined modules, incorporating standard logic functions. The range also includes timers and impulse modules.

- Complete range
- Stand alone, stackable or combinable modules
- Very fast response time
- Flexible and highly maintainable system
- DIN rail mounting

- Integral 3/4 or 1” ports (BSPP or NPT)
- High efficiency element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminium construction
- Secondary pressure ranges 12 and 16 bar
- Rolling diaphragm for extended life
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation.
- Low temperature -40’C with Regulators/Filters and Filter Regulators using combined manual/semi auto drain as standard without pressure gauge.

A range of speed controls, flow controls and plug-in sensor designed to be mounted directly onto the cylinder in the optimum position for maximum performance.

- "Push-in" or threaded connection
- Multifunction options
- Fit directly to cylinder ports
- Swivelling pilot banjo
- Pneumatic back pressure sensor

CE Ex II 2GD c 85°C

Operating information

Working pressure :

PWR-H, HB	1-10 bar
PWS-P	0-10 bar

Working temperature : -15°C to +60°C

Pilot pressure at 6 bar supply :

PWR-HB	(1/8", 1/4" versions)	: 4 bar
	(1/2" and 3/8" versions)	: 2,9 bar
PWS-P111		: 4,4 bar

ATEX approval : CE Ex II 2GD c 85 °C

Certificates summary

Risk assembly

Manufacturer
Particular considerations concerning the association of certified products ATEX constituting of sets, complete equipment or systems :
- cylinders and accessories as sensors, cylinder controls ;
- valves assembled with solenoids, connectors, islands ;
- FRL(s) combinations ;
- logic components in cabinets or housings ;
- mixed ATEX and non ATEX concerned components integrated on a single machine or device ;

ANY ASSEMBLY IS NOT COMPULSORY ATEX

User
According to 99/92/EC directive, the user (employer) must identify the buildings at the risks and classify them in zones. It defines the equipment adapted to its site.

Thus when it installs a whole equipment incorporating Atex certified apparatuses, and to avoid any risk of explosion, it must take into account the lower level of protection of the whole with regard to : the category, the maximum temperature of surface... and any parmeter indicated on the marking and in the instruction leaflet of each apparatus.

P1V-S Declaration of Conformity acc. ATEX 94/9/EC
P1V-S Declaration of Incorporation acc. EC Machinery Directive 2006/42/EC

We Parker Hannifin Manufacturing
Germany GmbH & Co. KG
Pneumatic Division Europe
Industriestrasse 8
70794 Filderstadt Germany

Declare that the following Air Motors have been assessed in accordance with ATEX 94/9/EC (Products for use in potentially explosive atmospheres). Air Motors **P1V-S012, P1V-S020, P1V-S028, P1V-S030, P1V-S057, P1V-S060, P1V-S086** and **P1V-S090** range are compatible for the use in explosive atmosphere **Ex II 2 GD c T6 (T80°C) X.**
Air Motors **P1V-S120** range are compatible for the use in explosive atmosphere **Ex II 2 GD c T5 (T95°C) X.**
All without brake option.
P1V-S is designed for utilization in applications falling under the scope of the ATEX 94/9/EC. These products are designed and manufactured in compliance with following elements:

- **EN 1127-1:2007** Explosive atmospheres – Explosion prevention and protection – Part 1: Basic concepts and methodology
- **EN 13463-1:2009** Non electrical equipment for use in potentially explosive atmospheres – Part 1: Basic method and requirements
- **EN 13463-5** Non-electrical equipment intended for use in potentially explosive atmospheres – Part 5: Protection by constructional safety ´c´
- **EN 983+A1:2008** Safety of machinery – Safety requirements for fluid power systems and their components - Pneumatics

As manufacturer of the partly completed machine we declare that:

- The specified Air motor corresponds to the listed essential requirements of the EC Machinery Directive 2006/42/EC
- The relevant technical documentation is compiled in accordance with part B of Annex VII
- The relevant technical documentation in accordance with part B of Annex VII will be transmitted in response to a reasonable request by the national authorities

Product: Air motors P1V-S

Directives	**Date**	**Applied and fulfilled essential requirements**
2006/42/EC	2006-06	1.1.2, 1.1.5, 1.3.4, 1.5.3, 1.7.3, 1.7.4

Standards	**Date**	**Remark**
DIN EN ISO 12100	2011-03	Partly fulfilled

This partly completed machinery must not be put into service until the final machinery into which it is to be incorporates has been declared in conformity with the provisions of the Directive 2006/42/EG, were appropriated.

Sticker

Additional Information
This coverage could only be referred to as long as operations needed for final assembling and starting up of theses products comply with standards relating to the above mentioned directive. Each time this will be required for compliance purpose, the user will have to apply for a complete coverage of the final assembled system according to the above mentioned directive and relating standards

Filderstadt, Germany June 2014

Ing. Franck Roussillon
European Product Manager
Actuators Business Unit, Pneumatic Division Europe

Additional safety instructions for installation in explosive atmospheres

Serious, even fatal, damage or injury may be caused by the hot moving parts of the P1V-S motors in the presence of explosive gas mixtures and concentrations of dust.

All installation, connection, commissioning, servicing and repair work on P1V-S motors must be carried out by qualified personnel taking account of the following :

- These instructions.
- Notices on the motor.
- All other planning documents, commissioning instructions and connection diagrams associated with the application.
- Provisions and requirements specific to the application.
- Applicable national/international regulations (explosion protection, safety and accident prevention).

Real life applications

P1V-S motors are designed to provide rotary movement in industrial applications, and should only be used in accordance with the instructions in the technical specifications in the catalogue, and within the operating range indicated on the motor housing. The motors meet the applicable standards and requirements of the Machinery Directive 94/9/EC (ATEX).

The motors must not be used as brakes in explosive atmospheres.
Braking involves driving the motor against the direction of rotation for which the motor is supplied with compressed air. The motor is then operating as a compressor, and there is a corresponding increase in temperature.

The motors must **not** be used underground in mines susceptible to firedamp and/or combustible dust. The motors are intended for use in areas in which explosive atmospheres caused by gases, vapours or mists of combustible liquids, or air/dust mixtures may be expected to occur during normal use (infrequently).

Checklist

Before using the motors in a potentially explosive atmosphere, you should check the following:

Do the motor specifications match the classification of the area of use in accordance with Directive 94/9/EC (previously ATEX 100a)?

- Equipment group.
- Equipment category.
- Zone.
- Temperature class.
- Max. surface temperature.

1. When installing the motor, is it certain that there is no potentially explosive atmosphere, oil, acids, gases, vapours or radiation?
2. Is the ambient temperature as specified in the technical data in the catalogue at all times?
3. Is it certain that the P1V-S motor is adequately ventilated and that no additional heat is added (for example in the shaft connection)?
4. Are all the driven mechanical components ATEX certified?

Installation requirements in potentially explosive atmospheres

- The temperature of the supply air must not exceed the ambient temperature.
- The P1V-S may be installed in any position.
- An air treatment unit must be attached to the inlet of the P1V-S air motor.
- In a potentially explosive atmosphere, none of the motor ports may be blocked because this may cause an increase in temperature. The air from the port must be taken to the silencer or, preferably, outside the potentially explosive area.
- The P1V-S motor must be connected to ground at all times, through its support, a metallic tube or separate conductor.
- The outlet of the P1V-S motor must not open within a potentially explosive area, but must be passed to the silencer or, preferably, removed and released outside the potentially explosive area.
- The P1V-S motor may only drive units that are ATEX certified.
- Ensure that the motor is not exposed to forces greater than those permitted in accordance with the catalogue.

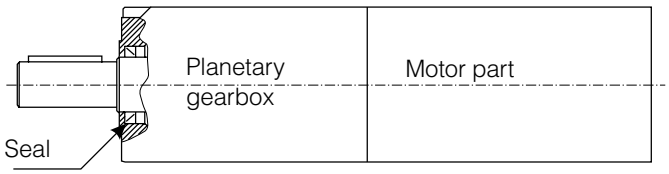
Measuring the temperature on the outside of the P1V-S motor (only when used in potentially explosive areas)

During the commissioning process, it is essential to measure temperature increases at the indicated positions on the outside of the P1V-S motor.
These measurements can be taken using standard thermometers.

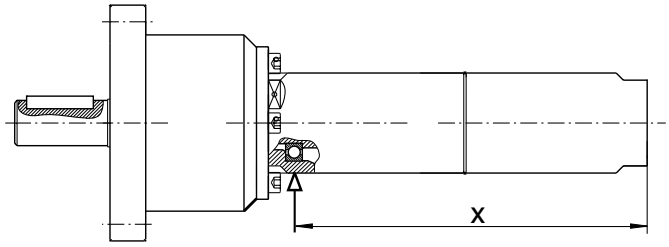
Checking the motor during operation

The motor must be kept clean on the outside, and a layer of dirt thicker than 5 mm must never be allowed to form.
Strong solvents should not be used for cleaning, because they can cause the seal (material NBR/FPM) around the drive shaft to swell, potentially increasing the temperature.

The temperature is measured on the metal surface next to the seal around the output shaft on all P1V-S012, P1V-S020, P1V-S028, P1V-S030, P1V-S057, P1V-S060, P1V-S086 and P1V-S090 motors.



Motors P1V-S030A0023 and P1V-S030A0010



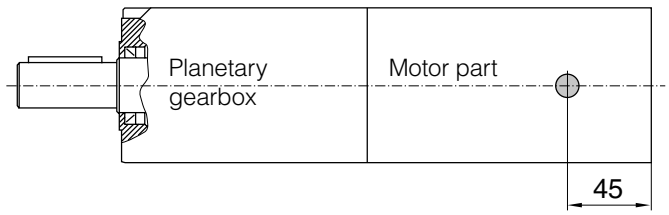
Motor	x [mm]
P1V-S030A0023	146
P1V-S030A0010	147,5

The maximum temperature is reached after approximately 1,5 hours of operation, and the difference in temperature between the motor and the ambient temperature must not exceed 40 °C.

If the temperature difference at the seal of a P1V-S 120 to 900 watts exceeds 40 °C, you should stop the motor immediately and contact Parker Hannifin.

The following applies to the P1V-S120 series:

The temperature is measured on the metal surface at a point 45 mm from the port end of the motor housing, on all P1V-S120.



The maximum temperature is reached after approximately 1,5 hours of operation, and the difference in temperature between the motor and the ambient temperature must not exceed 55 °C.

If the temperature difference at this point on a P1V-S120 exceeds 55 °C, you should stop the motor immediately and contact Parker Hannifin.

Marking of products

For all P1V-S 120 to 900 watts

CE Ex II2 GD c IIC T6 (80 °C) X

For the P1V-S120 1200 watts

CE Ex II2 GD c IIC T5 (95 °C) X

CE — **C**ommunatuté **E**uropéenne = EU
CE marking shows that as a manufacturer, Parker Hannifin meets the guidelines specified by the EU

Ex — **Ex** means that this product is intended for use in a potentially explosive area

II — stands for the equipment group (I = mines and II = other places liable to be endangered)

2GD — stands for equipment category
2G means the equipment can be used in zones 1 and 2 where there is a risk involving gas, vapour or mist of combustible liquids and **2D** in zones 21 and 22 where there is a risk involving dust .
2GD means the equipment can be used in zones 1, 2, 21 and 22.

c — Safe design (prEN 13463-5)

IIC — Explosion group, P1V-S air motors are tested to the highest standards in terms of test gases, and can be installed in the presence of all gases without restriction.

T6 — If equipment is in temperature class **T6**, the maximum surface temperature must not exceed 85 °C.
(To guarantee this, the product has been tested to ensure that the maximum is 80 °C. This provides a safety margin of 5 °K.)

T5 — If equipment is in temperature class **T5**, the maximum surface temperature must not exceed 100 °C.
(To guarantee this, the product has been tested to ensure that the maximum is 95 °C. This provides a safety margin of 5 °K.)

(80 °C) — Maximum permitted surface temperature on the motor in atmospheres containing potentially explosive dust.

X — Note special conditions

Test certificate number IBExU04ATEXB004 X from IBExU Institut für Sicherheitstechnik GmbH, D-09599 Freiberg, Germany

P1V-M Declaration of Conformity
According to ATEX 94/9/EC
P1V-M Declaration of Incorporation
According to EC Machinery Directive 2006/42/EC

We Parker Hannifin Manufacturing
Germany GmbH & Co. KG
Pneumatic Division Europe
Industriestrasse 8
70794 Filderstadt Germany

Declare that the following Air Motors have been assessed in accordance with ATEX 94/9/EC (Products for use in potentially explosive atmospheres). Air Motors here below from the P1V-M series are compatible for the use in explosive atmosphere **Ex II 2 GD c IIC T4 (130ºC) X.**
P/Ns are without gear boxes : P1V-M020B*xxx, P1V-M040B*xxx, P1V-M060B*xxx, P1V-M090B*xxx, P1V-M120B*xxx
And P/Ns with gear boxes are : P1V-M020C*xxx, P1V-M040C*xxx, P1V-M060C*xxx, P1V-M090C*xxx, P1V-M120C*xxx; * for internal vanes option 0 or Z, xxx for speed range
With *: for internal vanes option 0 or Z, xxx: for speed range

P1V-M is designed for utilization in applications falling under the scope of the ATEX 94/9/EC. These products are designed and manufactured in compliance with following elements:

- **EN 1127-1:2007** Explosive atmospheres – Explosion prevention and protection – Part 1: Basic concepts and methodology
- **EN 13463-1:2009** Non electrical equipment for use in potentially explosive atmospheres – Part 1: Basic method and requirements
- **EN 13463-5** Non-electrical equipment intended for use in potentially explosive atmospheres – Part 5: Protection by constructional safety ´c´
- **EN 983+A1:2008** Safety of machinery – Safety requirements for fluid power systems and their components - Pneumatics

As manufacturer of the partly completed machine we declare that:

- The specified Air motors correspond to the listed essential requirements of the **EC Machinery Directive 2006/42/EC**
- The relevant technical documentation is complied in accordance with **part B of Annex VII**
- The relevant technical documentation in accordance with part B of Annex VII will be transmitted in response to a reasonable request by the national authorities

Product: Air motor P1V-M Series

Directives	**Date**	**Applied and fulfilled essential requirements**
2006/42/EC	2006-06	1.1.2, 1.1.5, 1.3.4, 1.5.3, 1.7.3, 1.7.4

Standards	**Date**	**Remark**
DIN EN ISO 12100	2011-03	Partly fulfilled

This partly completed machinery must not be put into service until the final machinery into which it is to be incorporates has been declared in conformity with the provisions of the Directive 2006/42/EG, were appropriated.

P1D-S040MS-XXXX
P1D-S050MS-XXXX
P1D-S063MS-XXXX
P1D-S080MS-XXXX
P1D-S100MS-XXXX
P1D-S125MS-XXXX
XXXX= All strokes
*Without metal scraper ring

P1D-S are designed for utilization in applications falling under the scope of the Atex directive 94/9/EC. These products are designed and manufactured in compliance with the following elements:
EN 13463-1: 2001; Non-electrical equipment for potentially explosive atmosperes – Part 1: Basic method and requirements.
EN 13463-5: 2002: Non-electrical equipement intended for use in potentially explosive atmospheres – Part 5: Protection by constructional safety.
EN 983: Safety of machinery - Safety of requirements for fluid power systems and their components – Pneumatics.
The P1D complies with the current ISO 69431, ISO 15552, VDMA 24562 and AFNOR installation dimension standards
Parker Hannifin AB has been certified under the ISO 9001 QA standard since 1994.

Additional information:
This coverage could only be referred to as long as operations needed for final-assembling and starting up of theses products comply with standards relating to the above mentioned directive. Each time this will be required for compliance purpose, the user will have to apply for a complete coverage of the final assembled system according to the above mentioned directives and relating standards.

Inge Melkersson
Head of Design Department

Safety instructions for the P1D-S cylinder with accessories

Supplementary safety instructions for P1D-S cylinders installed in Ex-areas

Serious, even fatal, damage or injury may be caused by the hot moving parts of the P1D cylinders in the presence of explosive gas mixtures and concentrations of dust.

All installation, connection, commissioning, servicing and repair work on P1D cylinders must be carried out by qualified personnel taking account of the following :

- These instructions.
- Markings on the cylinder.
- All other planning documents, commissioning instructions and connection diagrams associated with the application.
- Provisions and requirements specific to the application.
- National/international regulations (explosion protection, safety and accident prevention).

Real life applications

P1D cylinders are designed to provide linear movement in industrial applications, and should only be used in accordance with the instructions in the technical specifications in the catalogue, and within the operating range indicated on the rating plate. The cylinders meet the applicable standards and requirements of directive 94/9/EC (ATEX).

The cylinders must not be used underground in mines susceptible to firedamp and/or flammable dusts. The cylinders are intended for use in areas in which explosive atmospheres caused by gases, vapours or mists of flammable liquids, or air/dust mixtures may be expected to occur during normal use (infrequently) .

Checklist

Before using the cylinders in an Ex-area, you should check the following:
Do the specifications of the P1D-S cylinder match the Ex-classification of the area of use in accordance with directive 94/9/EC (previously ATEX 100a)?

- Equipment group.
- Ex-equipment category.
- Ex-zone.
- Temperature class.
- Max. surface temperature.

1. When installing the P1D-S cylinder, is it certain that there is no potentially explosive atmosphere, oil, acids, gases, vapours or radiation?
2. Is the ambient temperature as specified in the technical data in the catalogue at all times?
3. Is it certain that the P1D-S cylinder is adequately ventilated and that no forbidden additional heat is added?
4. Are all the driven mechanical components ATEX certified?
5. Check that the P1D-S cylinder is safely earthed.
6. Check that the P1D-S cylinder is supplied with compressed air. Explosive gas mixtures must not be used for driving the cylinder.
7. Check that the P1D-S cylinder is not equipped with a metal scraper ring (special version).

Installation requirements in Ex-areas

- The temperature of the supply air must not exceed the ambient temperature.
- The P1D-S cylinder may be installed in any position.
- An air treatment unit must be attached to the inlet of the P1D-S cylinder.
- The P1D-S cylinder must be connected to earth at all times, through its support, a metallic tube or separate conductor.
- The outlet of the P1D-S cylinder must not open within an Ex-area, but must be passed to the silencer or, preferably, removed and released outside the Ex-area.
- The P1D-S cylinder may only drive units that are ATEX certified.
- Ensure that the P1D-S cylinder is not exposed to forces greater than those permitted in accordance with the catalogue.
- The P1D-S cylinder must be supplied with compressed air. Explosive gas mixtures must not be used.
- P1D-S cylinders with metal scraper rings must not be used in Ex-areas.

Inspecting cylinders during operation

The P1D cylinder must be kept clean on the outside, and a layer of dust/dirt thicker than 1 mm must never be allowed to form.
Strong solvents should not be used for cleaning, because they can cause the seal (material PUR) around the piston rod to swell, potentially increasing the temperature. Inspect and verify that the cylinder, with attachments, compressed air fittings, hoses, tubes, etc. meet the standards of "safe" installation.

Marking of cylinder P1D-S Standard (P1D-S***MS-****)

II 2GD c T4 120 °C

CE **C**ommunauté **E**uropéenne = EU
CE on the product shows that Parker Hannifin products meet one or more EU directives.

Ex means that this product is intended for use in potentially explosive atmospheres.

II Stands for the equipment group (**I** = mines and **II** = other hazardous areas).

2GD Stands for equipment category.
2G means the equipment can be used in zones 1 and 2 where there is a risk involving gases, vapours or mists of combustible liquids and **2D** in zones 21 and 22 where there is a risk involving dusts. **2GD** Means the equipment can be used in zones 1, 2, 21 and 22.

c Safe design (EN 13463-5).

T4 If equipment is in temperature class **T4**, the maximum surface temperature must not exceed 135 °C. (To guarantee this, the product has been tested to ensure that the maximum is 130 °C. This provides a safety margin of 5 °K).

120 °C Maximum permitted surface temperature on P1D-S cylinder in atmospheres containing potentially explosive dust.

Safety instructions for the P1D-T cylinder with accessories

Supplementary safety instructions for installation of ATEX certified cylinders.

The safety instructions in this document are valid for the ATEX certified P1D-T cylinders, bore 160 - 320mm, as per below with reference to the order code key in the product catalogue.

P1D-T***MS-****-EXNN

All strokes in the range 50 - 1000mm

Serious, even fatal, damage or injury may be caused by the hot moving parts of the P1D-T cylinders in the presence of explosive gas mixtures and concentrations of dust.

All installation, connection, commissioning, servicing and repair work on P1D-T cylinders must be carried out by qualified personnel taking account of the following

- These instructions
- Markings on the cylinder
- All other planning documents, commissioning instructions and connection diagrams associated with the application.
- Provisions and requirements specific to the application
- National/international regulations (explosion protection, safety and accident prevention)

Real life applications

P1D-T cylinders are designed to provide linear movement in industrial applications, and should only be used in accordance with the instructions in the technical specifications in the catalogue, and within the operating range indicated on the rating plate.
The cylinders meet the applicable standards and requirements of directive 94/9/EC (ATEX)

The cylinders must not be used underground in mines susceptible to firedamp and/or flammable dusts. The cylinders are intended for use in areas in which explosive atmospheres caused by gases, vapours or mists of flammable liquids, or air/dust mixtures may be expected to occur during normal use (infrequently)

Checklist

Before using the cylinders in an Ex-area, you should check the following:
Do the specifications of the P1D-T cylinder match the Ex-classification of the area of use in accordance with directive 94/9/EC (previously ATEX 100a)

- Equipment group
- Ex-equipment category
- Ex-zone
- Temperature class
- Max. surface temperature

1. When installing the P1D-T cylinder, is it certain that there is no potentially explosive atmosphere, oil, acids, gases, vapours or radiation?
2. Is the ambient temperature as specified in the technical data in the catalogue at all times?
3. Is it certain that the P1D-T cylinder is adequately ventilated and that no forbidden additional heat is added?
4. Are all the driven mechanical components ATEX certified?
5. Check that the P1D-T cylinder is safely earthed.
6. Check that the P1D-T cylinder is supplied with compressed air. Explosive gas mixtures must not be used for driving the cylinder.
7. Check that the P1D-T cylinder is not equipped with a metal scraper ring (special version).

Installation requirements in Ex-areas

- The temperature of the supply air must not exceed the ambient temperature.
- The P1D-T cylinder may be installed in any position.
- The P1D-T cylinder must not be installed where there is a risk of mechanical contact with any surrounding part or component.
- An air treatment unit must be attached to the inlet of the P1D-T cylinder.
- The P1D-T cylinder must be connected to earth at all times, through its support, a metallic tube or separate conductor.
- The outlet of the P1D-T cylinder must not be open within an Ex-area, but must be connected to the silencer or, preferably, piped and released outside the Ex-area.
- The P1D-T cylinder may only drive units that are ATEX certified.
- Ensure that the P1D-T cylinder is not exposed to forces greater than those permitted in accordance with the catalogue
- The P1D-T cylinder must be supplied with compressed air. Explosive gas mixtures must not be used
- P1D-T cylinders with metal scraper rings must not be used in Ex-areas

Inspecting cylinders during operation

The P1D-T cylinder must be kept clean on the outside, and a layer of dust/dirt thicker than 1 mm must never be allowed to form.
Inspect and verify that the cylinder, with attachments, compressed air fittings, hoses, tubes, etc. meet the standards of "safe" installation.

Spare parts

Only spare parts, kits etc. supplied by Parker Hannifin may be used for repair and maintenance of the P1D-T cylinders.

Marking of ATEX certified P1D-T cylinders

The ATEX certified P1D-T cylinders, bore 160 - 320mm, as per below with reference to the order code key in the product catalogue have an ATEX certification marking as shown further below.

P1D-T***MS-****-EXNN

All strokes in the range 50 - 1000mm

CE Ex II 2GD c T4 120 °C

T4 If equipment is in temperature class T4, the maximum surface temperature must not exceed 135 °C. (To guarantee this, the product has been tested to ensure that the maximum is 130 °C. This provides a safety margin of 5 °K.)

120 °C Maximum permitted surface temperature on P1D-S cylinder in atmospheres containing potentially explosive dusts.

Supplementary safety instructions for P8S- GPFLX/EX sensors installed in Ex-areas

Serious, even fatal, damage or injury may be caused by the hot moving parts of the P1D cylinders in the presence of explosive gas mixtures and concentrations of dust.

Instructions for use

Safety instructions

- Cylinder sensor ATEX classed for category II3G and II3D.
- Ambient temperature Ta = -20 °C to +45 °C.
- Temperature class T4 (gas), or max. surface temperature of T = 135 °C (dust).
- Protection class IP67.
- Read installation instructions before startup.
- Installation, connection and commissioning must be carried out by trained personnel.

Applications

- This sensor is designed for use in the T-groove of cylinders, and detects the magnetic field in potentially explosive areas. The sensor can only be installed in the T-groove of these cylinders.
- The sensor may also be installed on round cylinders by means of the following attachments:

  P8S-TMC01 Suitable for P1S and P1A diameter 10 - 25 mm

  P8S-TMC02 Suitable for P1S diameter 32 - 63 mm

  P8S-TMC03 Suitable for P1S diameter 80 - 125 mm.

The following data applies to these attachments :

- Ambient temperature Ta = 0 °C to 45 °C
- Low energy absorption to EN 50 021.

- The sensor may also be installed on tie-rod cylinders or profile cylinders by means of this attachment :

  P8S-TMA0X Suitable for P1D-T diameter 32 - 125 mm, P1E-T diameter 160 – 200 mm and C41 diameter 160 – 200 mm.

Installation

General : The sensor must be protected from UV radiation. The cable must be installed such that it is protected from external influences, for example it may be necessary to attach an external strain relief to the cable.

Technical data for sensor

Operating voltage Ub = 18 to 30 V DC
Max. load current Ia = 70 mA
Ambient temperature: -20 °C to 45 °C

Commissioning

When connecting the sensor to a power source, please pay attention to the following
a) the load data (operating voltage, continuous load current)
b) the wiring diagram for the sensor.

Maintenance

Our P8S-GPFLX/EX cylinder sensor is maintenance free, but the cable connections should be checked at regular intervals.
The sensor must be protected from UV radiation. The sensor must be kept clean on the outside, and a layer of dirt thicker than 1 mm must never be allowed to form. Strong solvents should not be used for cleaning as they may damage the sensor.

P8S-GPFLX/EX cylinder sensor

CE Ex II 3G EEx nA II T4X
II 3D T135 °C IP67

CE **C**ommunatuté **E**uropéenne = EU
CE on the product shows that Parker Hannifin products meet one or more EU directives.

Ex means that this product is intended for use in potentially explosive atmospheres.

II Stands for the equipment group (**I** = mines and **II** = other hazardous areas).

3G Stands for the equipment category.
3G means the equipment can be used in zone 2 where there is a risk involving gases, vapours or mists of combustible liquids.

EEx **EEx** means that this is an electrical product intended for use in Ex-areas.

nA II **n** Not ignitable to EN50021, **A** Explosion group tested with acetone, ethanol, toluene and xylene; **II** Not for use in the mining industry.

T4 X If equipment is in temperature class **T4**, the maximum surface temperature must not exceed 135 °C. (To guarantee this, the product has been tested to ensure that the maximum is 130 °C. This provides a safety margin of 5 °K). **X** Must be installed in accordance with the installation manual.

3D Stands for equipment category **3D** in zone 22 where there is a risk involving dust.

135 °C Maximum permitted surface temperature on the motor in atmospheres containing potentially explosive dust.

IP67 Satisfies protection class **IP67**.

Components such as cylinder attachments, tube fittings, tubes, etc.

Components

Parker Hannifin guarantees that our cylinder attachments, tube fittings, tubes, etc. are not subject to the provisions of the ATEX directive because they have no proper source of inflamation, nor an own ignition source.

A component means any item essential to the safe functioning of equipment and protective systems but with no autonomous function. Consequently, they are not marked and not any specific ATEX document will be added.

Examples :

- Tubes
- Fittings
- Fixings
- Mounting brackets
- Panels...

Global cylinder sensor P8S-GPFLX/EX for pneumatic cylinders

UK

Instructions for use

Safety instructions

- Cylinder sensor ATEX classed for category II3G and II3D
- Ambient temperature T_a = -20 °C to +45 °C
- Temperature class T4, or max. surface temperature of T = 135 °C
- Protection class IP67
- Read installation instructions before startup
- Installation, connection and commissioning must be carried out by trained personnel

Applications

- This sensor is designed for use in the T-groove of cylinders, and detects the magnetic field in explosion hazardous areas. The sensor can only be installed in the T-groove of these cylinders.
- The sensor may also be installed on round cylinders by means of the following attachments:
  - **P8S-TMC01** Suitable for P1S and P1A diameter 10 - 25 mm
  - **P8S-TMC02** Suitable for P1S diameter 32 - 63 mm
  - **P8S-TMC03** Suitable for P1S diameter 80 - 125 mm

  The following data applies to these attachments:
  - Ambient temperature Ta = 0 °C to 45 °C
  - High energy absorption to EN 50 021
- The sensor may also be installed on tie-rod cylinders or profile cylinders by means of this attachment:
  - **P8S-TMA0X** Suitable for P1D-T diameter 32 - 125 mm, P1E-T diameter 160 – 200 mm and C41 diameter 160 – 200 mm

Installation

General: The sensor must be protected from UV radiation. The cable must be installed such that it is protected from external influences, for example it may be necessary to attach an external strain relief to the cable.

Technical data for sensor

Operating voltage	U_b = 18 to 30 V DC
Max. load current	$I_a \leq$ 70 mA
Ambient temperature:	-20 °C to 45 °C

Commissioning

When connecting the sensor to a power source, please pay attention to the following
a.) the load data (operating voltage, continuous load current)
b) the wiring diagram for the sensor

Maintenance

Our P8S-GPFLX/EX cylinder sensor is maintenance free, but the cable connections should be checked at regular intervals.
The sensor must be protected from UV radiation. The sensor must be kept clean on the outside, and a layer of dirt thicker than 1 mm must never be allowed to form. Strong solvents should not be used for cleaning as they may damage the sensor.

Global cylindersensor P8S-GPFLX/EX för pneumatikcylinder

SE

Användningsinstruktion

Säkerhetsinstruktion

- Cylinder sensor ATEX klassad för kategori II3G och II3D
- Omgivningstemperatur T_a = -20 °C till +45 °C
- Temperaturklass T4, eller max yttemperatur på T = 135 °C
- Skyddsklass IP67
- Läs installationsanvisningen innan uppstart
- Montering, anslutning och idrifttagande skall göras av utbildad personal

Användningsområde

- Denna sensor för användning i T-spår på cylindrar är för att känna av magnetfältet i explosionsfarliga områden. På dessa cylindrar får sensorn bara monteras i T-spåren.
- Sensorn kan även monteras på rundcylindrar med hjälp av fästena:
  - **P8S-TMC01** Passar till P1S och P1A med diameter 10 - 25 mm
  - **P8S-TMC02** Passar till P1S med diameter 32 - 63 mm
  - **P8S-TMC03** Passar till P1S med diameter 80 - 125 mm

  För dessa fästen gäller följande:
  - Omgivningstemperatur T_a = 0 °C till 45 °C
  - Låg nivå av energiabsorption enligt EN 50 021
- Sensorn kan även monteras på cylindrar med dragstänger eller profilrör med hjälp av fästet:
  - **P8S-TMA0X** Passar till P1D-T diameter 32 –125 mm, P1E-T diameter 160 – 200 mm och C41 diameter 160 – 200 mm

Montering

Allmänt: Sensorn måste skyddas mot UV-strålning. Kabeln måste monteras så att den är skyddad mot yttre påverkan, tex kan en yttre dragavlastning av kabel behöva monteras.

Tekniska data på sensorn

Arbetsspänning	U_b = 18 till 30 V DC
Max belastningsström	$I_a \leq$ 70 mA
Omgivningstemperatur:	-20 °C till 45 °C

Idriftstagande

Vid anslutning av sensorn till en spänningskälla måste hänsyn tas till följande punkter
a) belastningsdata (arbetsspänning, kontinuerlig belastningsström)
b) anslutningsschema för sensorn

Underhåll

Vår cylindersensor P8S-GPFLX/EX är underhållsfri, dock bör kabelanslutningen kontrolleras med jämna mellanrum.
Sensorn måste skyddas mot UV-strålning. Sensorn måste hållas ren på utsidan och ett smutslager mer än 1 mm skall undvikas. Vid rengöring bör ej starka lösningsmedel användas då de kan skada sensorn.

Capteur mondial P8S-GPFLX/EX pour vérin pneumatique

FR

Instructions de service

Instructions de sécurité

- Capteur ATEX pour vérin, prévu pour les catégories II3G et II3D
- Température ambiante T_a = -20 °C à +45 °C
- Classe de température T4 ou température maximale de surface T = 135 °C
- Indice de protection IP67
- Lire le guide d'installation avant la mise en service
- Le montage, les connexions et la mise en service doivent être effectués par du personnel dûment formé

Champs d'utilisation

- Ce capteur qui s'enfiche dans les rainures en T d'un vérin a pour but de détecter le champ magnétique en atmosphère explosive. Le capteur ne peut être monté que dans les rainures en T de ces vérins.
- Le capteur peut également être monté sur des vérins cylindriques au moyen des fixations suivantes :
  - **P8S-TMC01** pour P1S et P1A, 10 à 25 mm de diamètre ;
  - **P8S-TMC02** pour P1S, 32 à 63 mm de diamètre ;
  - **P8S-TMC03** pour P1S, 80 à 125 mm de diamètre.

  Pour ces fixations, les données suivantes s'appliquent :
  - Température ambiante T_a = 0 °C à 45 °C
  - Faible niveau d'absorption énergétique selon EN 50 021
- Le capteur peut également être monté sur des vérins à tirants ou à tube profilé au moyen de la fixation suivante :
  - **P8S-TMA0X** pour P1D-T, 32 à 125 mm de diamètre ; pour P1E-T, 160 à 200 mm de diamètre ; pour C41, 160 à 200 mm de diamètre.

Montage

Généralités : Le capteur doit être protégé contre les UV. Le câble doit être monté de façon à être protégé contre les influences extérieures. Cela pourra nécessiter le montage d'une bride évitant les contraintes sur le câble du capteur.

Caractéristiques techniques du capteur

Tension d'utilisation	U_b = 18 à 30 V CC
Intensité de charge maxi.	$I_a \leq$ 70 mA
Température ambiante :	-20 °C à 45 °C

Mise en service

Lors de la mise sous tension du capteur, prendre en considération les points suivants :
a) paramètres de charge (tension d'utilisation, courant de charge continu)
b) schéma de câblage du capteur

Entretien

La capteur P8S-GPFLX/EX ne nécessite aucun entretien. Toutefois, il convient d'inspecter régulièrement la connexion du câble.
Le capteur doit être protégé contre les UV. Garder l'extérieur du capteur propre et éviter un encrassement trop important (plus de 1 mm). En nettoyant, ne pas utiliser des solvants forts car ils risquent d'endommager le capteur.

Globaler Zylindersensor P8S-GPFLX/EX für Pneumatikzylinder

DE

Anwendungsanleitung

Sicherheitshinweise

- Zylindersensor, ATEX-zugelassen für die Kategorien II3G und II3D
- Umgebungstemperatur T_a = -20 °C bis +45 °C
- Temperaturklasse T4, oder max. Außentemperatur T = 135 °C
- Schutzart IP67
- Vor Inbetriebnahme die Installationsanleitung lesen
- Montage, Anschluss und Inbetriebnahme muss durch geschultes Personal erfolgen

Anwendungsbereich

- Dieser Sensor wird in die T-Nut an Zylindern montiert und soll in explosionsgefährdeten Bereichen das Magnetfeld abtasten. An diesen Zylindern darf der Sensor ausschließlich in die T-Nut montiert werden.
- Der Sensor lässt sich mit Hilfe folgender Befestigungen auch an Rundzylinder montieren:
  - **P8S-TMC01** passend für P1S und P1A mit Ø 10 - 25 mm
  - **P8S-TMC02** passend für P1S mit Ø 32 -63 mm
  - **P8S-TMC03** passend für P1S mit Ø 80 -125 mm

  Für diese Befestigungen gilt Folgendes:
  - Umgebungstemperatur T_a = 0 °C bis 45 °C
  - Niedriger Gefärdungsgrad bzgl. Schlagenergie nach EN 50021
- Der Sensor lässt sich mittels folgender Befestigungen auf Zylinder mit Zugstangen oder Profilrohr montieren:
  - **P8S-TMA0X** passend für P1D-T, Ø 32 –125 mm, P1E-T, Ø 160 – 200 mm und C41, Ø 160 – 200 mm

Montage

Allgemein: Der Sensor ist vor UV-Strahlung zu schützen. Das Kabel so montieren, dass es vor äußeren Einwirkungen geschützt ist. So kann z.B. eine äußere Zugentlastung erforderlich sein.

Technische Daten des Sensors

Betriebsspannung	U_b = 18 bis 30 V GS
Max. Belastungsstrom	$I_a \leq$ 70 mA
Umgebungstemperatur:	-20 °C bis 45 °C

Inbetriebnahme

Bei Anschluss des Sensors an eine Spannungsquelle sind folgende Punkte zu beachten:
a) Belastungsdaten (Betriebsspannung, ständiger Belastungsstrom)
b) Anschluss-Schaltplan des Sensors

Wartung

Der Zylindersensor P8S-GPFLX/EX ist wartungsfrei. Jedoch sollte der Kabelanschluss regelmäßig kontrolliert werden.
Der Sensor ist vor UV-Strahlung zu schützen. Die Außenseite des Sensors muss sauber gehalten werden. Eine Schmutzschicht von mehr als 1 mm ist zu vermeiden. Zur Reinigung keine starken Lösungsmittel verwenden. Diese können den Sensor beschädigen.

Sensore universale P8S-GPFLX/EX per cilindri pneumatici

IT

Istruzioni per l'uso

Norme di sicurezza

- Il sensore per cilindri a norma ATEX rientra nelle classi II3G e II3D
- Temperatura ambiente T_a: da -20 °C a +45 °C
- Classe di temperatura T4 o max. temperatura ambiente T di 135 °C
- Classe di protezione IP67
- Leggere le istruzioni per l'installazione prima dell'uso
- Installazione, collegamento e messa in funzione devono essere effettuati da personale addestrato

Applicazioni

- Questo sensore viene installato nella scanalatura a T dei cilindri per rilevare il campo magnetico in ambienti esplosivi. Su questi cilindri il sensore deve essere installato esclusivamente nella scanalatura a T.
- Il sensore può anche essere installato su cilindri rotondi per mezzo degli appositi attacchi:

P8S-TMC01	per l'installazione su P1S e P1A con diametro 10-25 mm;
P8S-TMC02	per l'installazione su P1S con diametro 32-63 mm;
P8S-TMC03	per l'installazione su P1S con diametro 80-125 mm.

Per i suddetti attacchi vale quanto segue:
- Temperatura ambiente T_a: da 0 °C a 45 °C
- Non esporre a sollecitazioni eccessive, come indicato nella norma EN 50021

- Il sensore può anche essere installato su cilindri con tiranti o tubi profilati per mezzo dell'apposito attacco:

P8S-TMA0X	per l'installazione su P1D-T con diametro 32-125 mm; P1E-T con diametro 160-200 mm; C41 con diametro 160-200 mm.

Installazione

Generalità: Il sensore deve essere protetto dai raggi UV. Il cavo deve essere installato in posizione protetta, ad es. potrebbe essere necessario montare un supporto esterno.

Dati tecnici del sensore

Tensione di esercizio	U_b = 18-30 V DC
Max. corrente di carico	$I_a \leq 70$ mA
Temperatura ambiente: da	-20 °C a 45 °C

Messa in funzione

In sede di collegamento del sensore a un generatore di tensione, prestare attenzione a quanto segue:
a) dati di carico (tensione di esercizio, corrente di carico continua);
b) schema di collegamento del sensore.

Manutenzione

Il nostro sensore per cilindri P8S-GPFLX/EX non richiede manutenzione, ma si consiglia di controllare regolarmente il raccordo del cavo.
Il sensore deve essere protetto dai raggi UV. L'esterno del sensore deve essere mantenuto pulito. Evitare strati di sporcizia superiori a 1 mm. Per la pulizia, non utilizzare solventi forti che potrebbero danneggiare il sensore.

Sensor de cilindro Global P8S-GPFLX/EX para cilindros neumáticos

ES

Instrucciones de uso

Instrucciones de seguridad

- Sensor de cilindro ATEX, clasificado en las categorías II3G y II3D
- Temperatura ambiente T_a = -20 °C a +45 °C
- Clase de temperatura T4, o temperatura máxima de superficie T = 135 °C
- Clase de protección IP67
- Leer las instrucciones de instalación antes de usar
- El montaje, la conexión y la puesta en funcionamiento deber hacerlo personal especializado.

Campos de uso

- Sensor para el uso en la ranura T de los cilindros, para detectar el campo magnético en entornos explosivos. En estos cilindros el sensor sólo se puede montar en la ranura T.
- El sensor también se puede montar en cilindros esféricos usando los siguientes soportes:

P8S-TMC01	para el P1S y P1A con diámetro 10 - 25 mm
P8S-TMC02	para el P1S con diámetro 32 -63 mm
P8S-TMC03	para el P1S con diámetro 80 -125 mm

Para estos soportes rige:
- Temperatura ambiente T_a = 0 °C a 45 °C
- Bajo grado de choque eléctrico según EN 50 021

- El sensor también se puede montar en cilindros con varillas o perfiles con los soportes:

P8S-TMA0X	para el P1D-T diámetro 32 –125 mm, P1E-T diámetro 160 – 200 mm y C41 diámetro 160 – 200 mm

Montaje

Generalidades: El sensor debe ser protegido contra las radiaciones UV. El cable debe ser montado protegiéndolo de los efectos externos, p. ej. puede ser necesario montar un soporte externo del cable.

Especificaciones técnicas del sensor

Tensión de trabajo	U_b = 18 a 30 V CC
Corriente máxima de carga	$I_a \leq 70$ mA
Temperatura ambiente:	-20 °C a 45 °C

Puesta en funcionamiento

Al conectar el sensor a una fuente de potencia se deben tener en cuenta los siguientes aspectos:
a) datos de carga (tensión de trabajo, corriente de carga continua)
b) esquema de conexión del el sensor

Mantenimiento

Nuestro sensor P8S-GPFLX/EX no requiere mantenimiento, pero la conexión del cable debe ser controlada regularmente.
El sensor debe ser protegido contra las radiaciones UV. El exterior del sensor se debe mantener limpio y se debe evitar una capa de suciedad de más de 1 mm. No usar agentes limpiadores fuertes, el sensor se puede dañar.

We hereby declare that sensors P8S-GPFLX/EX comply with the basic requirements of the EC Directive specified under point 1 .

ISOMAX VALVES
Type DX1, DX2 , DX3

CE ⟨ε⟩ Parker

1 – SPECIFICATIONS

	Size 1	Size 2	Size 3
• Max Operating Frequency	10 Hz	5 Hz	4 Hz
• Operating temperature (Ta)	← -10°C to +60°C (14°F to 140°F) →		
• Fluid temperature	← -10°C to +60°C (14°F to 140°F) →		
• Operating pressure			
➢ internal pressure	30 to 145 psi		
➢ external pressure	-13 to 145 psi		
• Air condition	ISO 8573-1 : - Filtered air or inert gas class 5, - Dry air or inert gas class 4		
• Operating position	Any position		

2 – FUNCTIONS

5/2 Bistable	5/3 Pressure exhausted neutral
5/2 Bistable 14 prioritised	5/3 Pressure held neutral
5/2 Air-return monostable	5/3 Pressure applied neutral
5/2 Spring-return monostable	Pneumatic or electric piloting mode

3 – INSTALLATION

- Mounting interface for sub-bases according to ..... ISO 5599-1
- Recommended torque on sub-bases ..... DX1 : 3 Nm, DX2 : 4 Nm, DX3 : 8 Nm
- Electrical connection of the protective earth on the cover ..... with M5x10 clamping screw
- Connection of the subbase to protective earth
- Selection of internal or external pilot supply ..... by positioning the selector plate

With an electric pilot:

- Mounting interface for the electric operator ..... CNOMO 06-05-10
- Mounting with one of the following pilot operators: EV3000200, EV3001200, EV3003200, 1EV0*310, 1EV1*310, 1EV3*310 equipped with an ATEX solenoid type ..... EV30.A.EX...

WARNING

- Conditions for installing the product have to comply with specifications mentioned in chapters 1 and 3.
- Before maintenance on the product, stop the air and ensure that pipes are exhausted. Then proceed.
- The replacement of the product or of one of its parts must be done with a product or a part of the same ATEX category.
- Product cleaning should be done by a method complying with the specifications of the ATEX zone, preferably by aspiration and/or utilization of antistatic products. The deposit of dust should not exceed 5 mm.
- **The installation and maintenance of the product must be done by qualified personnel.**

4 – ATEX CLASSIFICATION

⟨ε⟩ II 2 GD c 85 °C

⟨ε⟩	Specific logo for safety in hazardous atmospheres
II	Destination: Group II: Atmospheres other than in mines
2	For use in zones 1 and 21
GD	Gas or Dust atmospheres
c	Protection mode: "c", constructional safety
85 °C	Temperature class (T6)

The maximum ambient temperature (Ta) of the equipment or of the subassembly incorporating ISOMAX valves will be defined as:

- (Ta) of the element having the lowest limit if this one is <60°C,
- 60°C if elements other than the valve have a (Ta) > 60°C.

Instruction de service **FR**

DISTRIBUTEURS ISOMAX

3 – INSTALLATION

- Montage sur embase selon plan de pose ..... ISO 5599-1
- Couples de serrage sur embases ..... DX1 : 3 Nm, DX2 : 4 Nm, DX3 : 8 Nm
- Raccordement électrique terre de protection du carter ..... par vis étrier M5x10
- Raccordement de l'embase à la terre
- Sélection de la pression de pilotage interne ou externe ..... par positionnement du sélecteur de pilotage

Avec pilotage électrique :

- Interface pour l'opérateur électrique ..... CNOMO 06-05-10
- Installation avec un des opérateurs suivants : EV3000200, EV3001200, EV3003200, 1EV0*310, 1EV1*310, 1EV3*310 équipé d'une bobine ATEX type ..... EV30.A.EX...

ATTENTION

- Le produit doit être installé dans un environnement conforme aux spécifications des chapitres 1 et 3.
- Avant toute intervention sur le produit, couper l'air comprimé. S'assurer que le circuit est purgé puis procéder à l'intervention.
- Le remplacement du produit ou de l'un de ses composants doit être effectué avec un produit ou un composant de même catégorie ATEX.
- Le nettoyage des produits sera réalisé selon une méthode respectant les spécificités ATEX de l'installation, de préférence par aspiration et/ou par utilisation de produits antistatiques. Le dépôt de poussière ne doit pas excéder 5 mm.
- **L'installation et la maintenance du produit doivent être effectuées par du personnel qualifié.**

4 – CLASSIFICATION ATEX

⟨ε⟩ II 2 GD c 85 °C

⟨ε⟩	Logo de référence pour la sécurité en atmosphères explosibles
II	Destination : Groupe II : Atmosphères de surface
2	Utilisation en zones 1 et 21
GD	Atmosphères de type gaz ou poussière
c	Mode de protection : "c", sécurité de construction
85 °C	Classe de température (T6)

La limite de température ambiante (Ta) de l'équipement ou de l'ensemble incorporant un distributeur ISOMAX sera définie comme suit :

- (Ta) du composant ayant la limite la plus faible si celle-ci est < 60°C,
- 60°C si les constituants autres que le distributeur ont une (Ta) > 60°C.

EC DECLARATION of CONFORMITY ⟨ε⟩

We, **Parker Hannifin France S.A.S.**
Etablissement d'Evreux
Rue H. Becquerel – BP 3124
27031 EVREUX CEDEX – France

*hereby declare that the following **ISOMAX** pneumatic valves :*

- **DX1 ..., DX2..., DX3...**, followed by a **"-EX"** suffix,

*are compatible for use in explosive atmosphere **II 2 GD (zones 1,2 and 21,22).***

These products are designed and manufactured in compliance with the European Directive:

- 94/9/EC, March 1994, **"ATEX"** .

The present declaration is based on the compliance with the following standards:

- Standard EN 13463-1, 2001 and AC:2002, Non-electrical equipment for potentially explosive atmospheres. Part 1: Basic methods and requirements,
- Standard EN 13463-5, 2003, Non-electrical equipment intended for use in potentially explosive atmospheres. Part 5: Protection by constructional safety "c" .

Type examination certificate: LCIE 04 ATEX 6165X

Delivered by: LCIE

Additional information:

These products are designed for utilization in applications falling under the scope of the ATEX Directive 94/9/EC. This coverage could only be referred to as long as operations required for the installation and the maintenance of these products are complying with related standards.

The user will have to comply with procedures for getting an approval of the final assembled system according to related regulations.

Issued at Evreux — Date : January 24th, 2007

CE marked: 2004

DECLARATION CE de CONFORMITE ⟨ε⟩

Nous, **Parker Hannifin France S.A.S.**
Etablissement d'Evreux
Rue H. Becquerel – BP 3124
27031 EVREUX CEDEX – France

*déclarons que les distributeurs pneumatiques **ISOMAX** référencés :*

- **DX1 ..., DX2..., DX3...**, suivis du suffixe **"-EX"**,

*sont utilisables en atmosphère explosible **II 2 GD (zones 1,2 et 21,22).***

Ces produits sont construits conformément aux dispositions de la directive européenne :

- 94/9/CE, mars 1994, **"ATEX"** .

La présente déclaration est établie sur la base de la conformité aux normes suivantes :

- norme EN 13463-1, 2001 et AC:2002, Matériel non électrique pour utilisation en atmosphères explosibles. Partie 1 : prescriptions et méthodes de base,
- norme EN 13463-5, 2003, Appareils non électriques destinés à être utilisés en atmosphères explosibles. Partie 5: Protection par sécurité de construction "c".

Attestation d'examen de type : LCIE 04 ATEX 6165X

Délivrée par : LCIE

Information complémentaire :

La conception de ces produits permet leur utilisation dans un environnement soumis à l'application de la Directive ATEX 94/9/CE sous réserve que les opérations nécessaires à leur installation et à leur maintenance soient effectuées en conformité avec les dispositions des normes en vigueur.

L' utilisateur prendra en charge la mise en conformité de l'installation finale conformément à la réglementation en vigueur.

Instruction Leaflet **GB** — **VALVE WITHOUT SUBBASE** — **PVL-C type**

1 – SPECIFICATIONS

• Max Operating Frequency	10 Hz (5 Hz for monostable)
• Operating temperature (Ta)	-15°C to + 60°C
• Fluid temperature	-15°C to + 60°C
• Operating pressure	
➢ Internal pressure	2 to 10 bar (3 to 10 for monostable valve electrically actuated)
• Air condition	ISO 8573-1 : - Filtered air or inert gas class 5, - Dry air or inert gas class 4
• Protection level : IP65	According to ISO 60529, dustproof
• Operating position	Any position

2 – FUNCTIONS

5/2 Bistable	5/3 Pressure exhausted neutral (COE and COP)
5/2 Air return monostable	5/3 Pressure held neutral
5/2 Spring return monostable	With a pneumatical or electric pilot

3 – INSTALLATION

- Mounting according to Parker technical leaflet.
- Earth connection is recommended for mounting rail.
- Maxi number of valve per island : 6 (to avoid electrostatic load)

With a pneumatical pilot :

- PVA-P111, PVA-P115 connectors for PVL-C1..6..
- PVA-P121, PVA-P122, PVA-P125 connectors for PVL-C1..4..
- Maxi torque on fittings : 1/8" : 10Nm, 1/4" : 20 Nm , 3/8" : 55 Nm

With an electric pilot :

- Mounting with ATEX solenoid PVA-F102BX.. and PVA-F102EX.. type

Head modules, tail air feed modules and intermediary air supply modules :

PVL-C1713, PVL-C1723, PVL-C1819, PVL-C1829, PVU-LCB119, PVU-LCC119

WARNING

- Conditions for installing the product have to comply with specifications mentioned in chapters 1 and 3.
- Before maintenance on the product, stop the air and ensure that pipes are exhausted. Then proceed.
- The replacement of the product or of one of its parts must be done with a product or a part of the same ATEX category.
- Product cleaning should be done by a method complying with the specifications of the ATEX zone, preferably by aspiration and/or utilization of antistatic products. The deposit of dust should not exceed 5 mm.
- **The installation and maintenance of the product must be done by qualified personnel.**

Instruction Leaflet **GB**

PILOT-OPERATOR
Type PVA-F102BX... and P2FS...

1 – SPECIFICATIONS

Operating pressure	0 to 10 bar (0 to 145 psi)
Operating temperature (Ta)	-15°C to +40°C (5°F to +104°F)
Air condition	ISO 8573-1 : - Filtered air or inert gas class 5 - Dry air or inert gas class 4
Operating voltage	PVA-F102B. : 24 Vdc ; PVA-F102E. : 48 Vdc
Voltage Tolerance	-10 % to +10 %
Current	PVA-F102B. : 24 Vdc ; P2FS. : 0,125 A
Polarity	Polarity insensitive
Consumption	6 W
Duty factor	100% to 40°C (104°F)
Protection degree	IP65 (EN 60529), dustproof
Operating position	Any position
Protection against mechanical shocks	With an envelope withstanding shocks ≥ 7 joules
Association with PRS-D10 Subbase	Stacked on PZU-A12 or PZU-C12

2 –FUNCTIONS

Pre-wired 3/2 NC Operator.

3 – INSTALLATION

Dimensions of mounting interface	22x30 mm
Screw for mounting the armature	M12 x 0,5mm
Max torque for the armature	6 Nm maxi
Recommendation for a cabinet	- SAREL : SPACIAL 3D, type : 83... - RITTAL : type KEL EX or equivalent
Maximum number of operators 100% ED	4 in an envelope of 8 dm³
Electrical connection by a cable pre-wired on the operator	2P+E, 3 x ∅ 0,75 mm² (Yellow-green for Earth)
Connector	Not removable
Torque for fastening the connector	0,3 to 0,5 Nm

WARNING

- Conditions for installing the operator must comply with specifications mentioned in chapters 1 and 3. The permanently connected cable must be terminated according to one type of protection described in EN 60079-0 standard
- Installing the operator in a cabinet rated IP40 or more requires a provision for exhaust by either funnelling or with a muffler.
- Before energising, ensure that the voltage of the supply is the same as the voltage marked on the coil.
- Before maintenance operations, stop the air and electrical supply and ensure that pipes are exhausted. Then disconnect the 3 wires and proceed. Check the state of the 3 wires.
- The replacement of the product or of one of its parts must be done with a product or a part of the same ATEX category.
- Cleaning operations should be done in compliance with the specifications of the ATEX zone, preferably by aspiration and/or utilization of antistatic products. The deposit of dust should not exceed 5 mm.
- **The installation and maintenance operations must be done by qualified personnel.**

II 2 G D Ex e II T4 Ex tD A21 T135°C IP65

	Specific logo for safety in hazardous atmospheres
II	Destination : Group II : Atmospheres other than in mines
2	For use in zone 1 and 21
GD	Gas or Dust atmospheres
Ex	Compliance with CENELEC standards
e	Protection mode : "e" increased safety
T4	Temperature class : 135 °C
tD A21	Protection mode : "tD" protection by enclosures in the presence of combustible dust zone 21
T 135 °C	Maximum surface temperature (for dusty atmosphere)

The maximum ambient temperature (Ta) of the subassembly equipped with the pilot operator will be 40°C (104°F) according to chapter 1.

Instruction de service **FR**

ELECTROVANNE
Type PVA-F102BX... et P2FS...

1 – SPECIFICATIONS

Pression de service	0 à 10 bar
Température de service (Ta)	-15°C à +40°C
Fluide admissible et qualité	ISO 8573-1 : - Air ou gaz neutre filtré classe 5 - Air sec ou gaz neutre classe 4
Tension de service	PVA-F102B. : 24 Vdc ; PVA-F102E. : 48 Vdc
Tolérance de tension	-10 % à +10 %
Courant	PVA-F102B. : 24 Vdc ; P2FS. : 0,125 A
Polarité	Non polarisée
Puissance consommée	6 W
Taux de charge	100% à 40°C
Indice de protection	IP65 (EN 60529), étanchéité à la poussière
Position de fonctionnement	Indifférente
Protection contre les chocs mécaniques	Par enveloppe résistant à des chocs ≥ 7 joules.
Association avec embase PRS-D10	Montée sur PZU-A12 ou PZU-C12

2 –FONCTIONS

Electrovanne 3/2 NF précâblée.

3 – INSTALLATION

Dimensions de l'interface mécanique	22x30 mm
Fixation du noyau par vis de	M12 x 0,5mm
Couple de serrage du noyau	6 Nm maxi
Préconisation pour montage en enveloppe	- coffret SAREL : SPACIAL 3D, type 83... - coffret RITTAL : type KEL EX ou équivalent
Nombre maximum d'électrovannes	4 en service continu dans une enveloppe de 8 dm³
Raccordement électrique par cordon pré-câblé sur la bobine	2P+T, 3 x ∅ 0,75 mm² (Ti jaune-vert pour la terre)
Connecteur	Non débrochable
Couple de serrage du connecteur	0,3 à 0,5 Nm

ATTENTION

- Le produit doit être installé dans un environnement conforme aux spécifications des chapitres 1 et 3. L'extrémité libre du câble de connexion soldaire doit répondre à l'un des types de protection décrits dans la norme EN 60079-0.
- L'installation du produit dans une enveloppe classée IP40 ou plus nécessite de ménager une mise à l'échappement canalisée ou par silencieux.
- Avant mise sous tension, s'assurer de la parfaite concordance de la tension entre la bobine et l'alimentation électrique.
- Avant toute opération de maintenance, couper l'air comprimé et l'alimentation électrique. S'assurer que le circuit est purgé puis débrancher le câble électrique. Vérifier l'état du câble.
- Le remplacement du produit ou de l'un de ses composants doit être effectué avec un produit ou un composant de même catégorie ATEX.
- Les opérations de nettoyage seront réalisées conformément aux spécificités ATEX de l'installation, de préférence par aspiration et/ou par utilisation de produits antistatiques. Le dépôt de poussière ne doit pas excéder 5 mm.
- **L'installation et les opérations de maintenance doivent être effectuées par du personnel qualifié.**

T 135 °C	Température maximale de surface (pour atmosphère poussiéreuse)

La température ambiante maximale (Ta) du sous-ensemble équipé de l'électrovanne sera de 40°C conformément au chapitre 1.

EC DECLARATION of CONFORMITY CE

We, **Parker Hannifin France S.A.S.**
Etablissement d'Evreux
Rue H. Becquerel – BP 3124
27031 EVREUX CEDEX – France

hereby declare that the following electro-pneumatic valves:

- **type PVA-F102BX... and P2FS...**

are compatible for use in explosive atmosphere ***II 2 GD (zones 1,2 and 21,22).***

These products are designed and manufactured in compliance with the European directive:

- 94/9/EC, March 1994, **"ATEX"**

The present declaration is based on the compliance with the following standards:

- standard EN 60079-0, 2006, electrical apparatus for explosive gas atmospheres. Part 0 : General requirements.
- standard EN 60079-7, 2003, electrical apparatus for explosive gas atmospheres. Part 7 : Increased safety "e".
- standard EN 61241-1, 2006, electrical apparatus for use in the presence of combustible dust. Part 1 : Protection by enclosures "tD".

EC certificate of conformity: LCIE 03 ATEX 6278X
Quality assurance certificate: LCIE 03 ATEX Q 6037
Delivered by: LCIE – id. 0081

Additional information:

These products are designed for utilization in applications falling under the scope of the ATEX Directive 94/9/EC. This coverage could only be referred to as long as operations required for the installation and the maintenance of these products are complying with related standards.

The user will have to comply with procedures for getting an approval of the final assembled system according to related regulations.

CE marked: 2006

DECLARATION CE de CONFORMITE CE

Nous, **Parker Hannifin France S.A.S.**
Etablissement d'Evreux
Rue H. Becquerel – BP 3124
27031 EVREUX CEDEX – France

déclarons que les distributeurs électro-pneumatiques :

- **type PVA-F102BX... et P2FS...**

sont utilisables en atmosphère explosible ***II 2 GD (zones 1, 2 et 21, 22).***

Ces produits sont construits conformément aux dispositions de la directive européenne :

- 94/9/CE, mars 1994, **"ATEX"**

La présente déclaration est effectuée sur la base de la conformité aux normes suivantes :

- norme EN 60079-0, 2006, matériel électrique pour atmosphères explosives gazeuses. Partie 0 : Règles générales.
- norme EN 60079-7, 2003, matériel électrique pour atmosphères explosives gazeuses. Partie 7 : Sécurité augmentée "e".
- norme EN 61241-1, 2006, matériels électriques pour utilisation en présence de poussières combustibles. Partie 1 : Protection par enveloppes "tD".

Attestation de conformité CE : LCIE 03 ATEX 6278X
Certificat d'assurance qualité : LCIE 03 ATEX Q 6037
Délivrés par : LCIE – id. 0081

Information complémentaire :

La conception de ces produits permet leur utilisation dans un environnement soumis à l'application de la Directive ATEX 94/9/CE sous réserve que les opérations nécessaires à leur installation et à leur maintenance soient effectuées en conformité avec les dispositions des normes en vigueur.

L' utilisateur prendra en charge la mise en conformité de l'installation finale conformément à la réglementation en vigueur.

Instruction Leaflet — GB

30mm CNOMO Operator System

Type P2FSB.2EX and P2FSB.3EX
Solenoid type P2FSB.A2EX.. and P2FSB.A3EX..

1 – SPECIFICATIONS

Solenoid:	P2FSB.A2EX..	P2FSB.A2EX..	P2FSB.A3EX..
• Operating temperature (Ta)	← -15°C to +50°C (+5°F to +122°F) →		
• Operating voltages	24, 48 Vdc	24, 48, 115, 230 Vac	24, 48 Vdc
• Voltage Tolerance	-10%to +10%	-10%to +10%	-10%to +10%
• Duty factor	100%	100%	100%
• Consumption	3 W	3,2 VA	3,8 W
• ATEX temperature class	T5	T5	T4

Assembly with operators:

- Association with operators types: EV000*00, EV001*00, EV003*00, 1EV0*310, 1EV1*310, 1EV2*310
- Operators interface: CNOMO 06-05-10
- IP level: IP66 (EN60529)
- Operating position: Any position
- Operating pressure: 0 to 10 bar
- Air condition: ISO 8573-1: - Filtered air or inert gas class 5; - Dry air or inert gas class 4

2 – FUNCTIONS

3/2 CNOMO Operator System for piloting pneumatic valves.

3 – INSTALLATION

- Association with operators: see chapter 1
- Electrical connection on the equipment: 3 wires Ø 0,75 mm², 2P+E (Yellow-green for Earth)
- Connection of the connector's body to earth: optional
- Fastening torque on valves: 1,5 Nm

WARNING

- The installation must be done in compliance with specifications mentioned in chapters 1 and 3. The permanently connected cable must be terminated according to one type of protection described in EN 50014 standard.
- If the installation is done in a cabinet rated IP40 or more, it is necessary to have a provision for exhaust by either funnelling or with a muffler.
- Before energizing, ensure that the voltage of the supply is the same as the voltage marked on the coil.
- Before maintenance operations, stop the air and electrical supplies and ensure that the pipes are exhausted. Then disconnect the 3 wires and proceed.
- The replacement of the product or one of its parts must be done with a product or a part having the same ATEX category.
- Cleaning operations should be done in compliance with the specifications of the ATEX zone, preferably by aspiration and/or utilization of antistatic products.
- **The installation and maintenance operations must be done by qualified personnel.**

EC DECLARATION of CONFORMITY

We, **Parker Hannifin France S.A.S.**
Etablissement d'Evreux
Rue H. Becquerel – BP 3124
27031 EVREUX CEDEX – France

*hereby declare that the 30mm **ATEX** solenoids used for driving electro-pneumatic valves intended for use in explosive atmospheres **II 2 GD in zones 1, 2 and 21, 22**:*

- **types EV00.A2EX.. and EV00.A3EX..**

are designed and manufactured in compliance with the European directive:

- 94/9/EC, March 1994, "**ATEX**"

The present declaration is based on the compliance with the following elements:

- standard EN 50014, 1997 and A1, A2:1999, electrical apparatus for potentially explosive atmospheres. General requirements.
- standard EN 60079-18, 2004, Electrical apparatus for explosive gas atmospheres. Part 18: Construction, test and marking of type of protection encapsulation "m" electrical apparatus.
- standard EN 50281-1-1, 1998 and A1:2002, Electrical apparatus for use in the presence of combustible dust – Part 1-1: Electrical apparatus protected by enclosures - Construction and testing.

EC type certificate: CESI 05 ATEX 065 X
Quality assurance certificate: LCIE 03 ATEX Q 9037

Additional information:
These products are designed for utilization in applications falling under the scope of the ATEX Directive 94/9/EC. This coverage could only be referred to as long as:

- these products are assembled with operators type EV300.100, EV300.200 or 1EV.*310,
- operations required for installation and maintenance are complying with related standards. Each time this will be required for compliance purpose, the user will have to apply for a coverage of the final assembled equipment.

Issued at Evreux — Date: June 12th, 2005

DECLARATION CE de CONFORMITE

Nous, **Parker Hannifin France S.A.S.**
Etablissement d'Evreux
Rue H. Becquerel – BP 3124
27031 EVREUX CEDEX – France

*déclarons que les bobines **ATEX** 30mm pour commande de distributeurs électro-pneumatiques utilisables en atmosphères explosibles **II 2 GD, en zones 1, 2 et 21, 22** :*

- **types EV00.A2EX.. et EV00.A3EX..**

sont construits conformément aux dispositions de la directive européenne :

- 94/9/CE, mars 1994, "**ATEX**".

La présente déclaration est établie sur la base de la conformité aux normes suivantes :

- norme EN 50014, 1997 et A1, A2:1999, matériel électrique pour atmosphères explosibles. Règles générales.
- norme EN 60079-18, 2004, matériel électrique pour atmosphères explosibles gazeuses. Partie 18 : Construction, essais et marquage des matériels électriques du type de protection par encapsulage "m".
- norme EN 50281-1-1, 1998 et A1:2002, Matériels électriques destinés à être utilisés en présence de poussières combustibles – Partie 1-1 : Matériels électriques protégés par enveloppes - Construction et essais.

Attestation de conformité CE : CESI 05 ATEX 065 X
Certificat d'assurance qualité : LCIE 03 ATEX Q 9037

Information complémentaire :
La conception de ces produits permet leur utilisation dans un environnement soumis à l'application de la Directive ATEX 94/9/CE sous réserve que :

- ces produits soient assemblés avec les opérateurs type EV300.100, EV300.200 ou 1EV.*310,
- les opérations nécessaires à leur installation et à leur maintenance soient effectuées en conformité avec les normes en vigueur. Chaque fois que cela sera nécessaire, l'utilisateur devra effectuer la démarche de mise en conformité de l'équipement final.

Instruction Leaflet **GB** — **VikingXtreme VALVES** P2L.X type

1 – SPECIFICATIONS

- Max Operating Frequency ..... 1 Hz
- Operating temperature (Ta) ..... - 40 °C to + 60 °C (air pilot, lever)
  - 10 °C to + 50 °C (electrical valves)
- Fluid temperature ..... - 40 °C to + 60 °C (air pilot, lever)
  - 10 °C to + 50 °C (electrical valves)
- Operating pressure
  - Internal pressure ..... 2 to 10 bar
- Air condition ..... ISO 8573-1 : - Filtered air or inert gas class 5,
  - Dry air or inert gas class 4
- Operating position ..... Any position

2 – FUNCTIONS

5/2 Bistable	5/3 Pressure exhausted neutral (COE and COP)
5/2 Air return monostable	5/3 Pressure held neutral
5/2 Spring return monostable	With a pneumatical or electric pilot

3 – INSTALLATION

- Mounting according to Parker technical leaflet
- Electrical connection of the protective earth by M3, M4 or M5 screw
- Maxi number of pneumatic valve per island (to avoid electrostatic load) : 10 (size A or B), 6 (size C or D)
- Maxi torque of fixing screws : M3 : 1.3 Nm ; M4 : 3 Nm ; M6 : 10.5 Nm
- Maxi torque on operator : 1.4 Nm
- Maxi torque on fittings : 1/8" : 10 Nm ; 1/4" : 40 Nm ; 3/8" : 55 Nm ; 1/2" : 75 Nm

With an electric pilot :

Mounting with ATEX Nass solenoid 0513 00 to 0513 49 and 1213 00 to 1213 49 type
Or ATEX Nass solenoid 0515 30 to 0515 59 and 1215 30 to 1215 59 type (take care of dimensions for valve island)
Or ATEX Nass solenoid 0515 60 to 0515 99 and 1215 60 to 1215 99 type

WARNING

- Conditions for installing the product have to comply with specifications mentioned in chapters 1 and 3.
- Before maintenance on the product, stop the air and ensure that pipes are exhausted. Then proceed.
- The replacement of the product or of one of its parts must be done with a product or a part of the same ATEX category.
- Product cleaning should be done by a method complying with the specifications of the ATEX zone, preferably by aspiration and/or utilization of antistatic products. The deposit of dust should not exceed 5 mm.
- **The installation and maintenance of the product must be done by qualified personnel.**

Ces produits sont construits conformément aux dispositions de la directive européenne :

- 94/9/CE, mars 1994, **"ATEX"** .

La présente déclaration est établie sur la base de la conformité aux normes suivantes :

- norme EN 13463-1, 2001 et AC : 2002, Matériels non électriques pour utilisation en atmosphères explosibles. Partie 1 : Prescriptions et méthode de base,
- norme EN 13463-5, 2003, Appareils non électriques destinés à être utilisés en atmosphères explosibles. Partie 5 : Protection par sécurité de construction "c".

Dossier technique : 3001880X

Déposé auprès de : LCIE
33 avenue du Général Leclerc, 92260 Fontenay-Aux-Roses

Information complémentaire :

La conception de ces produits permet leur utilisation dans un environnement soumis à l'application de la Directive ATEX 94/9/CE sous réserve que les opérations nécessaires à leur installation et à leur maintenance soient effectuées en conformité avec les dispositions des normes en vigueur.

L'utilisateur prendra en charge la mise en conformité de l'installation finale conformément à la réglementation en vigueur.

EC DECLARATION of CONFORMITY

We, **Parker Hannifin France S.A.S.**
Etablissement d'Evreux
Rue H. Becquerel – BP 3124
27031 EVREUX CEDEX – France

Hereby declare that the following electro-pneumatic valves:

- **P2L.X....A...., P2L.X5....A.....**

Are compatible for use in explosive atmosphere II 2 GD (zones 1,2 and 21,22).

These products are designed and manufactured in compliance with the European Directive:

- 94/9/EC, mars 1994, **"ATEX"**.

The present declaration is based on the compliance with the following standards, for the products indicated hereafter entering the composition of the unit above mentioned :

➢ **P2L.X..... et P2L.X5.... type valves**

II 2 GD c 135 °C

- standard EN 13463-1, 2001 and AC : 2002, Non-electrical equipment for potentially explosive atmospheres. Part 1: Basic method and requirements,
- standard EN 13463-5, 2003, Non-electrical equipment intended for use in potentially explosive atmospheres. Part 5: Protection by constructional safety "c".

Technical file: 3001880X

Submitted at: LCIE
33 avenue du Général Leclerc, 92260 Fontenay-Aux-Roses

Instruction Leaflet **GB**

Limit switches

CE ⟨Ex⟩ Parker

1 – SPECIFICATIONS

• Operating temperature (Ta)	-15°C to +60°C (5°F to +140°F)
• Fluid temperature	-15°C to +60°C (5°F to +140°F)
• Operating pressure	3 to 8 bar (45 to 116 psi)
• Air condition	ISO 8573-1: - Filtered air or inert gas class 5 - Dry air or inert gas class 4
• Flow rate (l/mn) at 6 bar (ISO 6358)	60 for PXC-M11. 85 for PXC-M12., PXC-M13. 250 for PXC-M52.
• Max Operating Frequency	5 Hz
• Protection degree	IP 65 (EN 60529), dustproof
• Operating position	Any position

2 – MODELS AND FUNCTIONS

PXC-M... : 3/2 limit switches

3 – INSTALLATION

- Mounting according to the PARKER catalogue
- The speed of attack must be lower than 1m/s for all the product range
- The fixing of the product must be firm
- Earth connection recommended

WARNING

- Conditions for installing the components must comply with specifications mentioned in chapters 1 and 3.
- Before maintenance operations, stop the air and ensure that pipes are exhausted. Then proceed.
- The replacement of a component must be done with a component of the same ATEX category.
- Cleaning operations should be done in compliance with the specifications of the ATEX zone, preferably by aspiration and/or utilization of antistatic products. The deposit of dust should not exceed 5 mm.
- **The installation and maintenance operations must be done by qualified personnel.**

4 – ATEX CLASSIFICATION

⟨Ex⟩ II 2 GD c 85 °C

⟨Ex⟩	Specific logo for safety in hazardous atmospheres
II	Destination : Group II : Atmospheres other than in mines
2	For use in zones 1 and 21
GD	Gas or Dust atmospheres
c	Protection mode : "c", constructional safety
85°C	Temperature class (T6)

The maximum ambient temperature (Ta) of the equipment or of the subassembly incorporating limit switches will be defined as:

- (Ta) of the element having the lowest limit if this one is < 60°C,
- 60°C if elements other than the limit switches have a (Ta) > 60°C.

Instruction de service **FR**

Interrupteurs de position

CE ⟨Ex⟩ Parker

1 – SPECIFICATIONS

• Température de service (Ta)	-15°C à +60°C
• Température du fluide	-15°C à +60°C
• Pression de service	3 à 8 bar
• Fluide admissible et qualité	ISO 8573-1 : - Air ou gaz neutre filtré classe 5 - Air sec ou gaz neutre classe 4
• Débit (en l/mn) à 6 bar (ISO 6358)	60 pour le PXC-M11. 85 pour le PXC-M12., PXC-M13. 250 pour le PXC-M52.
• Fréquence de service maxi	5 Hz
• Degré de protection	IP 65 selon EN 60529, étanchéité à la poussière
• Position de fonctionnement	Indifférente

2 – TYPES ET FONCTIONS

PXC-M... : Interrupteurs de position 3/2

3 – INSTALLATION

- Montage selon description du catalogue PARKER
- La vitesse d'attaque doit être inférieure à 1 m/s pour toute la gamme
- La fixation du produit doit être ferme
- Raccordement à la terre du produit

ATTENTION

- Les composants doivent être installés dans un environnement conforme aux spécifications des chapitres 1 et 3.
- Avant toute opération de maintenance, couper l'air comprimé. S'assurer que le circuit est purgé puis procéder à l'intervention.
- Le remplacement d'un composant doit être effectué avec un composant de même catégorie ATEX.
- Les opérations de nettoyage seront réalisées conformément aux spécificités ATEX de l'installation, de préférence par aspiration et/ou par utilisation de produits antistatiques. Le dépôt de poussière ne doit pas excéder 5 mm.
- **L'installation et les opérations de maintenance doivent être effectuées par du personnel qualifié.**

4 – CLASSIFICATION ATEX

⟨Ex⟩ II 2 GD c 85 °C

⟨Ex⟩	Logo de référence pour la sécurité en atmosphères explosibles
II	Destination : Groupe II : Atmosphères de surface
2	Utilisation en zones 1 et 21
GD	Atmosphères de type gaz ou poussière
c	Mode de protection : "c", sécurité de construction
85°C	Classe de température (T6)

La limite de température ambiante (Ta) de l'équipement ou de l'ensemble incorporant les interrupteurs de position sera définie comme suit :

- (Ta) du composant ayant la limite la plus faible si celle-ci est < 60°C,
- 60°C si les constituants autres que les interrupteurs de position ont une (Ta) > 60°C.

DECLARATION OF CONFORMITY (ATEX)

We **Parker Hannifin Ltd.**
Pneumatic Division
Walkmill Lane
Bridgtown
Cannock
Staffs
WS11 0LR

Declare that the following product families are non electrical and have been assessed in accordance with ATEX 94/9/EC (products for use in potentially explosive atmospheres). Electrical items supplied with any of the listed products will have their own Declaration of Conformities: -

Global Air Preparation

…….. Referenced Normative Documents

EN13463 Non-electrical equipment for potential explosive atmospheres

…….. Equipment Group and Category classification

II 3 GD 80^0 C - Self Certification

…….. In addition
We have conducted a hazard risk assessment analysis and concluded that the products do not possess their own potential ignition source. The basis of this declaration is the self-ignition hazard assessment on representative test samples of the product family.

Product	Series	Category
Filter*	P31FA, P32FA, P33FA	for zone 1, 21
Regulator	P31RA, P32RA, P33RA	for zone 1, 21
Filter regulator*	P31EA, P32EA, P33EA	for zone 1, 21
Lubricator*	P31LA, P32LA, P33LA	for zone 1, 21
Ball Valve & Slide Valve	P31VA, P32VA, P33VA	for zone 1, 21
Manifold	P31MA, P32MA, P33MA	for zone 1, 21
For non-fitted solenoid product		
Soft Start & Dump Valve	P31TA, P32TA	for zone 1, 21
Soft Start Valve	P31SA, P32SA	for zone 1, 21
Dump Valve	P31DA, P32DA	for zone 1, 21

*Filter, Filter Regulator and Lubricator – This evaluation applies to products fitted with metal bowls only.

Following Ignition Hazard Assessments performed on the non-electrical products listed above, in accordance with the requirements of EN 13463-1:2009, it was considered that the equipment does not contain its own source of ignition, and therefore is not within the scope of directive 94/9/EC.

The products can be used in a Group II Category 2 environment assuming that the ATEX Directive and the following conditions are complied with:

- Installation and maintenance of the product must be undertaken by qualified personnel.
- Do not mount the products in an area where impact may occur.
- Filters must be used to limit the introduction of particles and to capture particles generated in service.
- Supply air quality must be within ISO 8573-1:2010 Class 1.4.2.
- Maximum working temperature to be as stated on product label.
- WARNING – pulsating pressure and/or a closed circuit can generate heat.
- Deposits of dust on the product must not exceed 5mm thickness.
  Refer to technical file for surface areas of plastics.
  The unit must be earthed via the compressed air supply line.
- The unit must not come into contact with liquid solvents, acids or alkalis.
  Refer to technical file for chemicals known to be incompatible.
  Product cleaning must be undertaken using a method complying with the specification of the ATEX zone, preferably by using mild soap and water or antistatic products.
- **Regulators, Filter Regulators:**
  Do not use Regulators or Filter Regulators within systems that can create vibration within the Regulator/Filter Regulator unit.
- **Solenoid Operated Valves:**
  Are suitable for use in an ATEX environment, (Group II Category 2) providing ATEX approved solenoids are fitted.
- Technical file available on request.
